

Project Introduction

FOUR DIRECTION

Problem Statement

Most travel apps only handle one piece of this with either bookings, or budgeting, or itineraries. So travellers end up manually piecing it all together themselves. Group trips make it worse, since getting everyone's schedules, budgets, and preferences to line up is genuinely difficult. And when something changes mid-trip, there's rarely any real help from existing platforms in adjusting.

Target users

Traveler

Our main principle on this project is to get all traveler to use our app to plan:

- 1. rich traveler*
- 2. budget traveler*

Pricing: Freemium model

FREE

To download.....

Pay for premium usage

Feature	Free	Pro (RM200/year)
Offline Access	Wi-Fi / Data required	Full offline maps & itinerary
Route Optimization	Manual sorting	1-click auto-optimizes best route
Booking Sync	Manual email forward	Auto-syncs from Gmail
Map Export	None	Export to Google Maps
Experience	Has upgrade prompts	Ad-free & priority support
AI Assistant	Basic AI suggestions	Unlimited AI trip generation

Problem encountered

Making an all in one service will be quite impossible, because there will be a few problem that we must address:

- Cost will be high
- Not enough time
- Server lagging problem

Final Solutions

A – Integrated Travel Planner

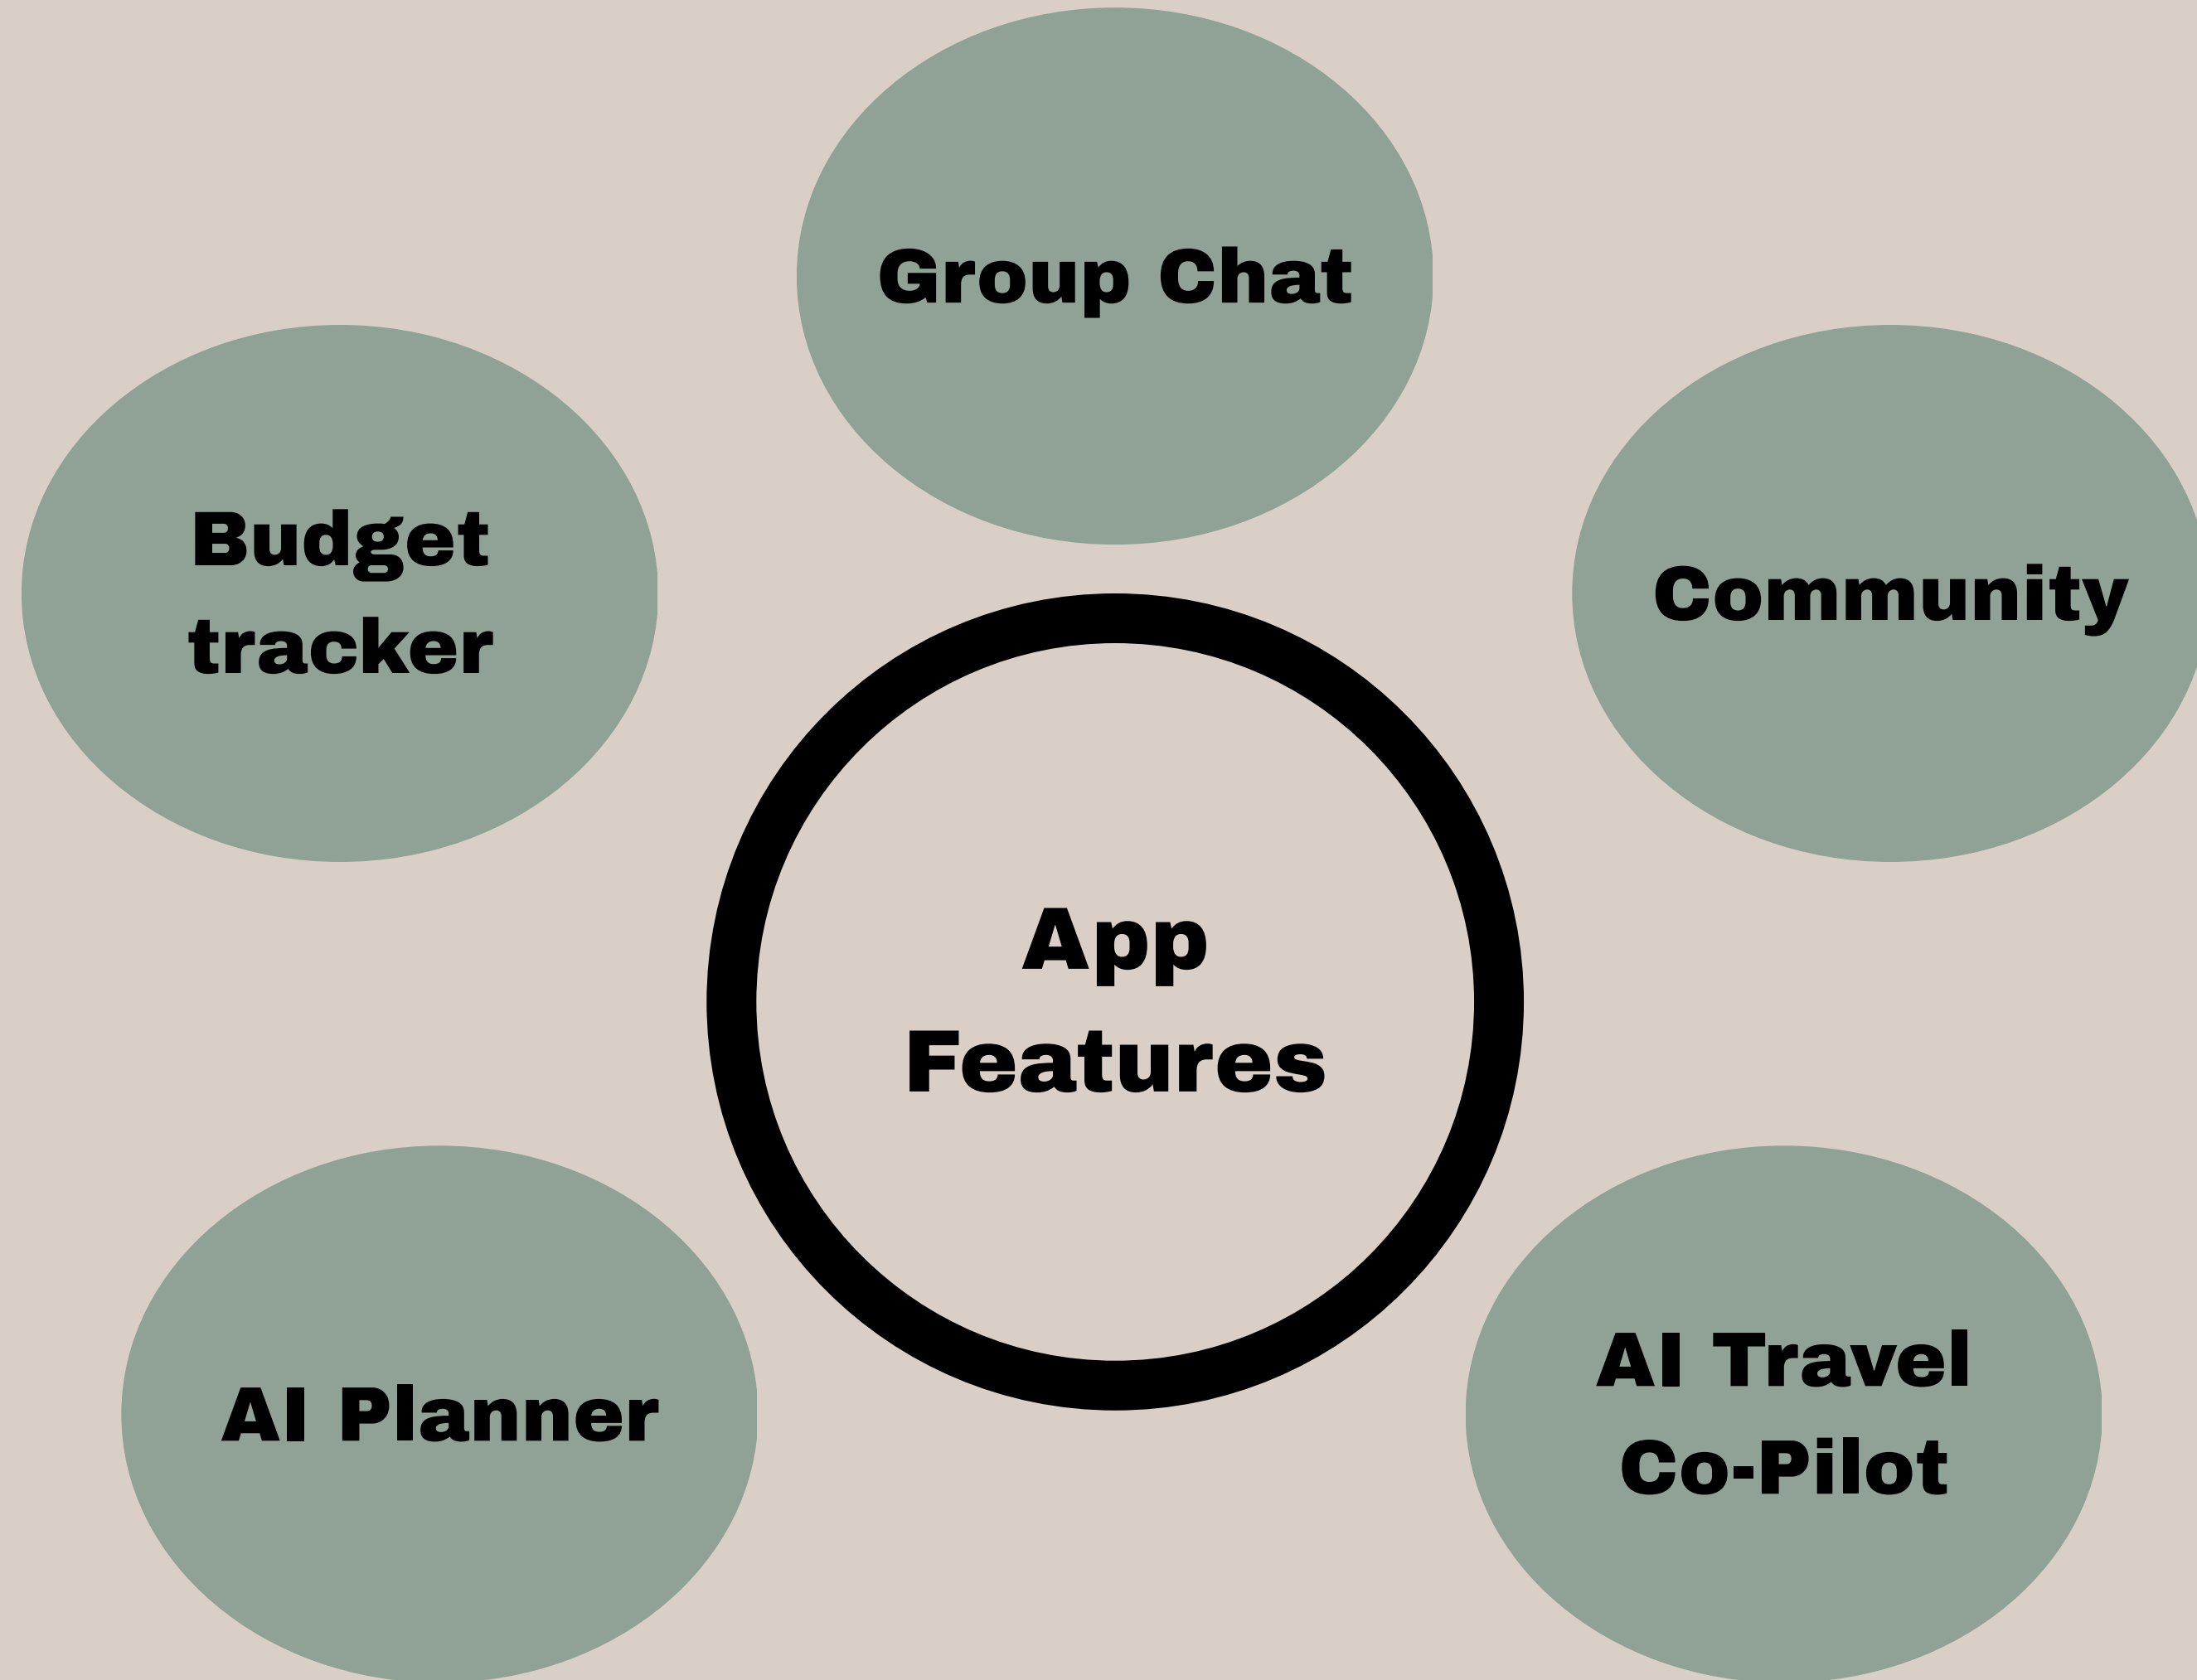

Combines multiple travel-related functions into one platform and directly addresses the problem of switching between different apps.

B – AI Travel Assistant

Provides personalized travel recommendations and assistance, making trip planning more convenient and efficient.

We'll exclude services such as :

- booking hotel
- booking flights
- booking foods services

AI Planner

Can plan whole journey:

1. *Plan Budget (Affordable/Midrange/Premium)*
2. *Suggest a suitable location*
 - a. *Restaurant*
 - b. *Entertainment*
 - c. *Culture/History*
 - d. *Knowledge*
3. *Plan the time and date*
4. *Plan the transport*
5. *Create document to refer to*

HIGHLIGHT:

1. *Can manually modify the plan, it will also help to rewrite the document*
2. *It will automatically view the details of travel destinations.*
 - a. *Give suggestion to join the local event*
 - b. *Observe any accident and give a backup plan*

✦ AI Travel Assistant

Hello! I'm your travel assistant. How can I help you today?

Ask about destinations...

AI Travel Co-Pilot

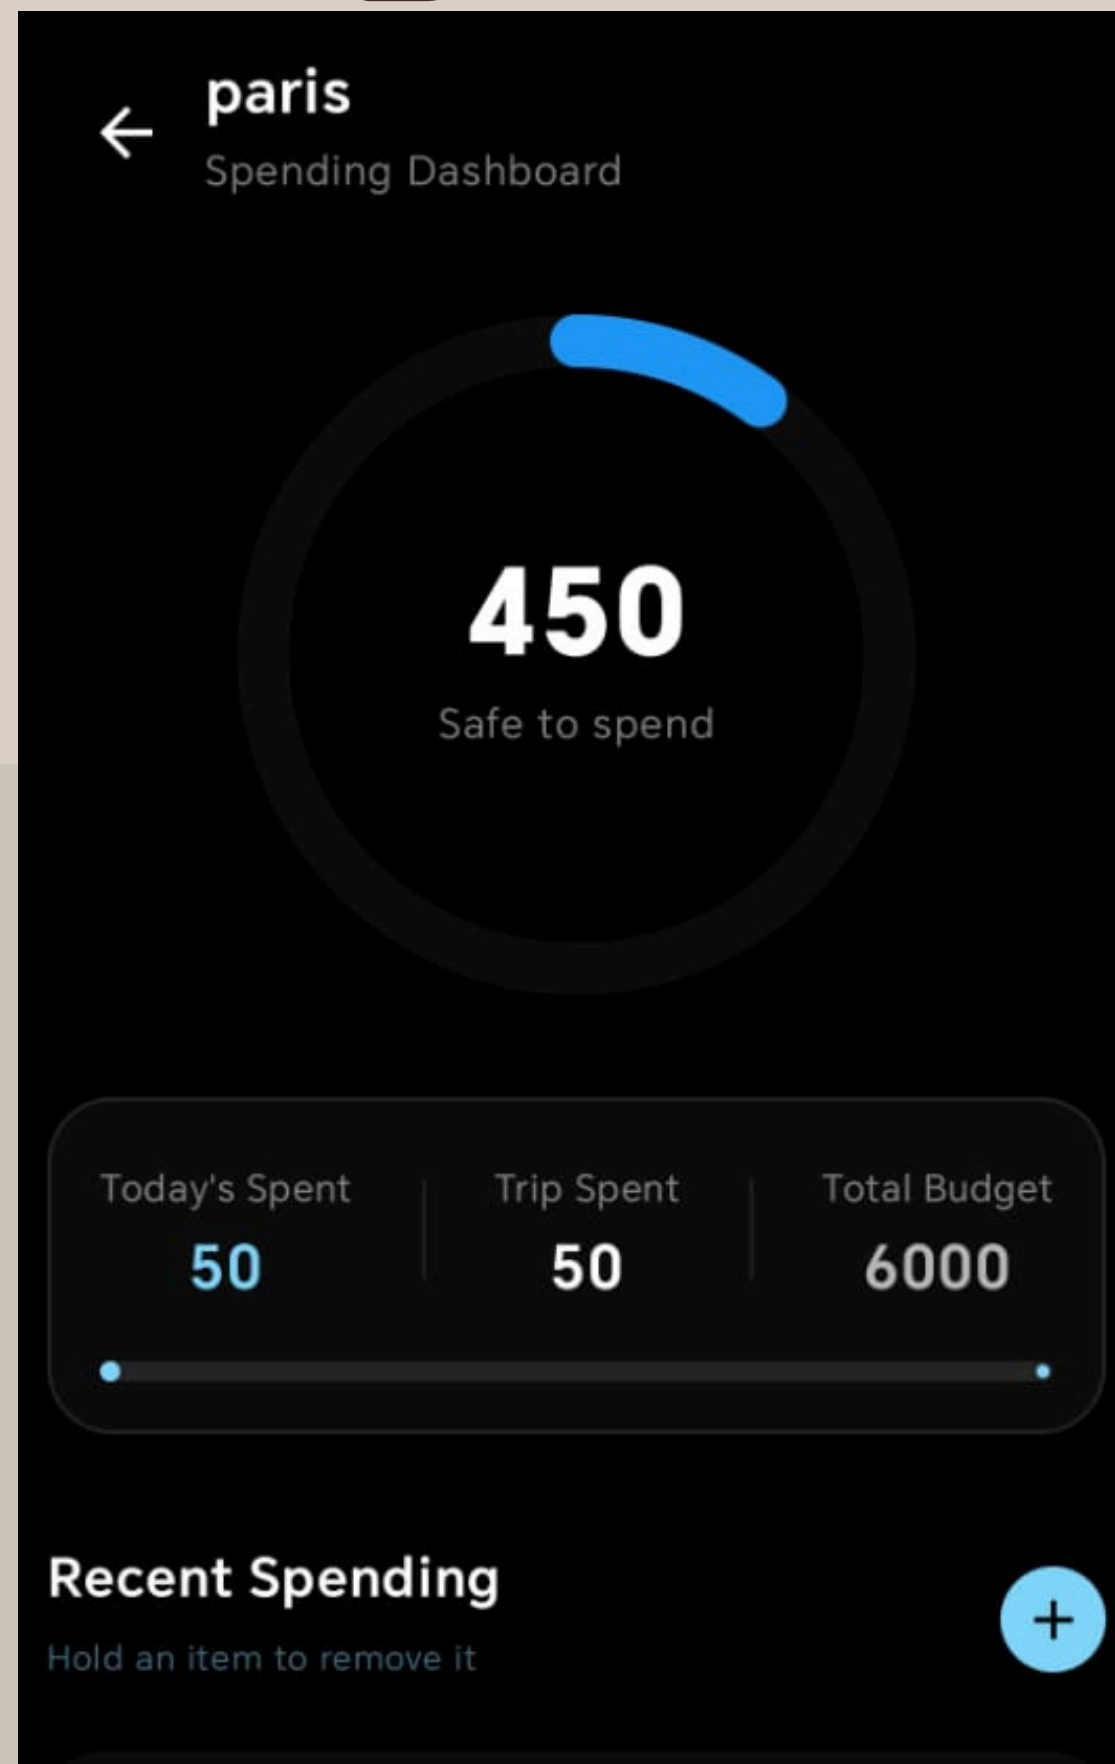

- Market Gap: Current planners rely on passive calendar notifications or require users to manually set multiple alarms every night.
- Our Edge (Proactive Timeline Management): Features deep integration with system-level alarms. The AI automatically sets your morning wake-up call based on the travel distance to your first destination and pushes proactive, step-by-step reminders throughout the entire day.

Budget tracker

- *Implemented a Dynamic Allowance system. If a user saves money on Monday (e.g., they ate street food instead of a restaurant), that surplus automatically moves to Tuesday. Their "Safe to Spend" ring actually grows! Conversely, if they overspend, it intelligently recalculates to keep the trip on track. It's a "Living Budget."*
- *Added Back-Tracking support with a Date Picker. Users can go back in time to log missed items, and the "Safe to Spend" pulse ring for today will re-adjust instantly.*

Budget Planner

- *Integrated a Safety Buffer Slider (0–20%). This allows users to bake an "Emergency Fund" directly into their plan with one swipe. The app treats this as a separate, protected category.*
- *Added Quick Start Templates (Backpacker, Mid-Range, Luxury). These aren't just labels; they are intelligent presets that suggest realistic daily allowances and category ratios based on the user's selected travel style.*

Navigation / Map

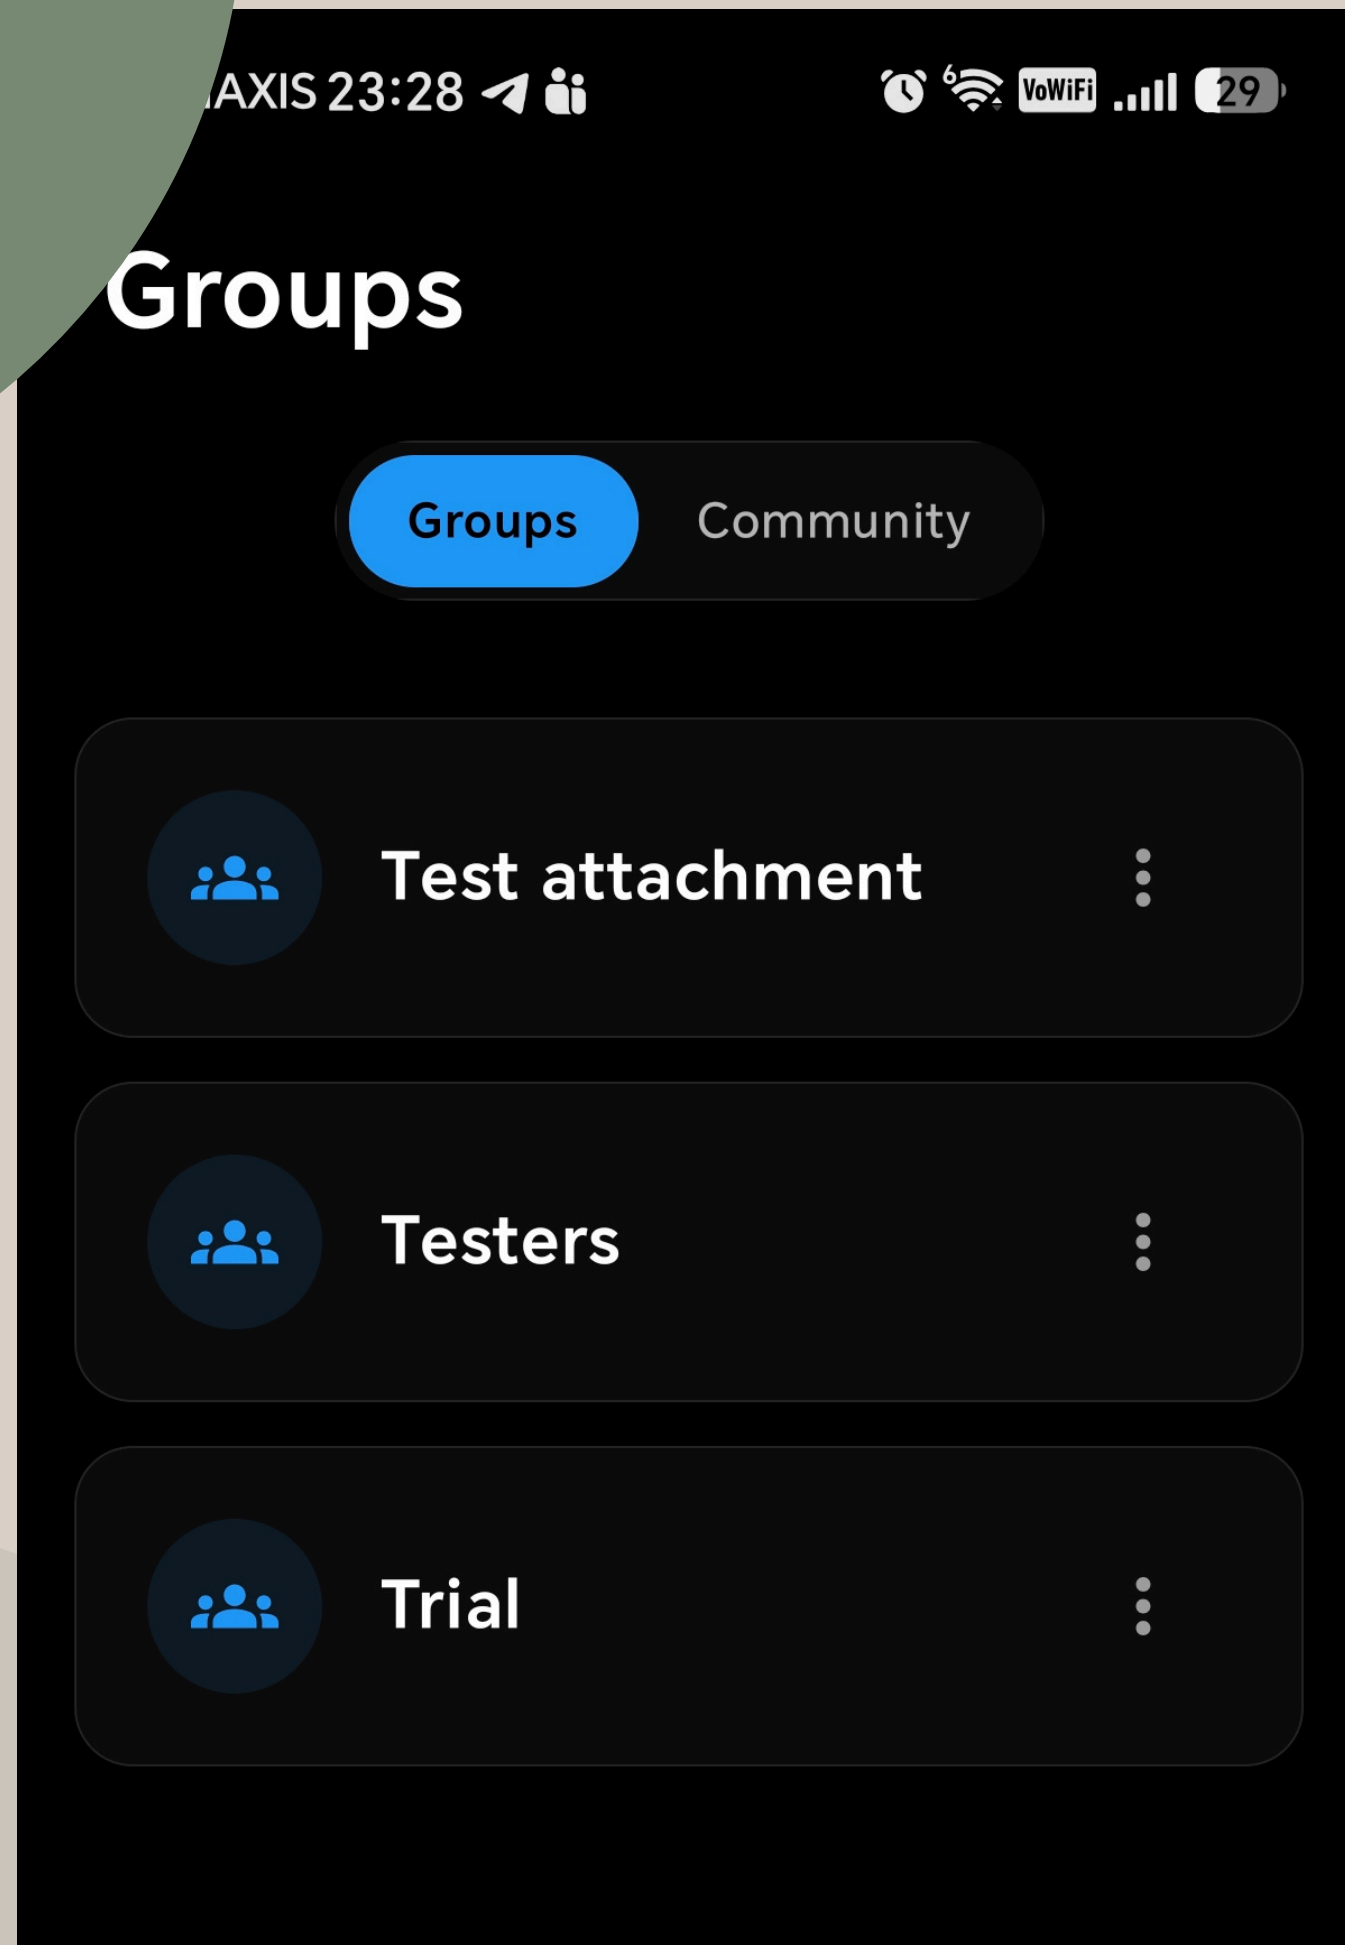

- *An integrated map service that provides turn-by-turn navigation directly to destinations found in the user's AI-planned itinerary.*
- *Built directly into the ecosystem to ensure a seamless transition from planning to traveling without the friction of external apps.*
- *Integration with the In-app Calendar helps make it easy for users to plan routes*

In-app Calendar

- *An in-app calendar that is able to record plans such as planned locations to visit, hotels to stay at, and notes to keep track off.*
- *Has integration with AI Trip Planner and Navigation, allows the AI to update your plans, and view routes and photos in-app. Allows collaboration with other people in Group Chat, helping people in a group plan hassle free.*

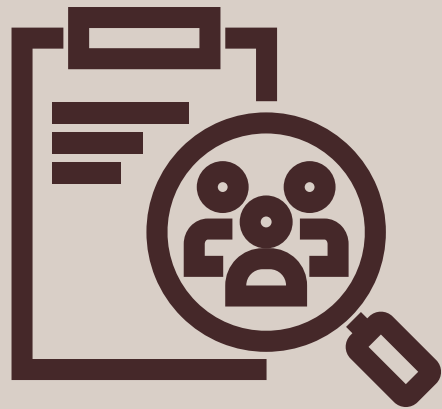

Community & Group Chat

In our app, we are open for users to form communities where people can post travel guides, travel tips and travel trends.

Users can also form group chat with family members or friends where they can discuss and plan about their travel. Groups that are created can easily add or remove places of interest or plans from their schedules. They can plan together in one seamless environment, with each connected system.

Other features

Map:

Able to track public transportations

App AI:

Able to help users to plan travel schedule

Customer Service:

Able to answer customers' questions

Resources

We are using android studio developed by IntelliJ and Kotlin language to develop this app for android mobile devices to ensure high performance, modern syntax, and seamless integration with Android's UI components and mapping SDKs.

android
studio

Resources

Mapbox Maps SDK

Pros:

- High customization for map styles
- High-performance vector rendering
- Features offline support

Cons

- Commercial platform with a usage-based billing tier
- More initial configuration required

Google Places API

Pros:

- Allows us to gather data such as photos and reviews about physical locations, businesses, landmarks, and points of interest (POIs) globally.

Cons

- Using Google's Pay-as-you-go policy, we are only allowed limited request per month.

Google Gemini API

Pros:

- Allows us to use Google Gemini AI as a source of AI interactions.

Cons

- We are limited to Flash and Flash-Lite models only as a free tier user, so we can only make typically 5–15 Requests per minute

Closing Statement

Thank you
